```
# sv
Everything you need to build a Svelte project, powered by [sv](https://github.com/sveltejs/cli).

## Creating a project
If you're seeing this, you've probably already done this step. Congrats!

```bash
create a new project in the current directory
npx sv create

create a new project in my-app
npx sv create my-app
```

## Developing
Once you've created a project and installed dependencies with `npm install` (or `pnpm install` or `yarn`), start a development server:

```bash
npm run dev

or start the server and open the app in a new browser tab
npm run dev -- --open
```

## Building
To create a production version of your app:

```bash
npm run build
```

You can preview the production build with `npm run preview`.

> To deploy your app, you may need to install an [adapter](https://svelte.dev/docs/kit/adapters) for your target environment.
```
